

Competence Pool Weihenstephan – the nucleus for a comprehensive network of science and food industry

About us!

The Competence Pool Weihenstephan (CPW) collects and relays experiences and know-how of science, research and industry. The concentration of resources and the structured cooperation of the players in industry and academia are important factors of an efficient transfer of technology and

knowledge! This transfer is done by proven approaches such as seminars and work-shops with participants from industry and business as well as science and research. Here the focus is not only on the knowledge and technology transfer but also on establishing contacts and fostering networking.

We are a competence hub!

It is the stated goal of the Competence Pool Weihenstephan (CPW) to intensify networking between research and science and the beverage and food industry. Based on partnerships the network of experts and their competence fields is continuously expanding and therefore enabling a comprehensive offer for interactive facilitation of knowledge transfer.

We promote and support enterprises!

Another goal of CPW is to support companies in securing funding for R&D projects at national and international level. Technological progress is moving at an ever-increasing pace so that many companies are no longer able to keep up solely with their own research capacities and therefore increasingly need the collaboration with R&D partners.

We provide training!

In our training centre for instrumental analysis (AsiA) we offer hands on training of mass spectrometric methods and strategies beyond the utilisation of standard instruments to laboratory technicians and trainees from the environmental, food, pharmaceutical, biological and chemical industries.

A comprehensive services portfolio is our strength! Our main fields of expertise are:

Research

- National and international research projects
- Cooperation within the framework of the DADD (German Academic Exchange Service) etc.

Knowledge transfer

- Scientific theses
- Preparation and organisation of seminars and workshops
- Trainings centre for instrumental analysis (AsiA) with emphasis on mass spectrometry

Project Management

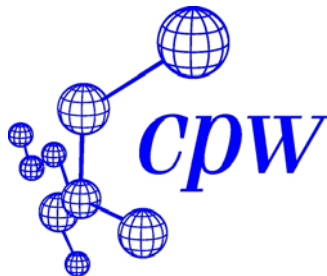

- Publications and presentations
- Consultation regarding the pursuit of goal oriented national and international sponsored programmes
- Consultation services for the food and beverage industry with emphasis on: water, energy, innovative environmental technologies as well as instrumental analysis

Contact

We offer:

- Research and technology
- Knowledge transfer
- Seminars
- Training
- Project management
- Consultation regarding sponsored programmes
- Contacts

Become part of our CPW Network!

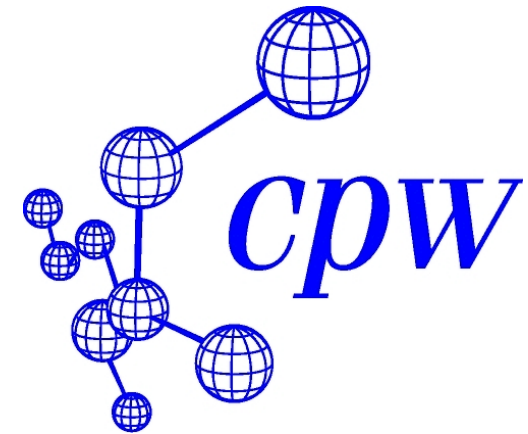

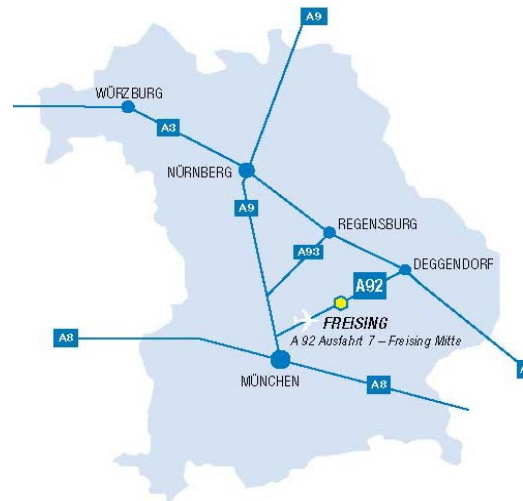

Center of Life and Food Sciences Weihenstephan
Life and Food Sciences, Land Use and Environment

Director: Prof.Dr.Dr. Harun Parlar
Scientific Director: Dr.-Ing. Karl Glas
Analysis Director: Dr.rer.nat. Thomas Letzel
Scientific Advisor: Prof.Dr.-Ing. Roland Meyer-Pittroff
Coordination & Administration: Jutta Pierschalik
