

apisBlue

Cofounder (m/w/d)

We are Florian and Michael, cofounders of apisBlue, a Munich-based startup for automation in viticulture, pomiculture and silviculture. Currently, we are working on the prototype of a **monitoring drone**. Our goal is to relieve farmers through **automation** and enable a **sustainable and future-proof agriculture**.

We are looking for support on our path to finish the prototype and found the company. **Technical know-how**, being **proactive** and willing to work on **interdisciplinary** tasks is important to us. Experience with multispectral data or machine learning are a bonus but not mandatory.

We want to explicitly encourage **female and diverse applicants** to diversify our team from the start.

You can contact us here:
